1. Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification does not provide support for a device for carrying out a bioelectrical interaction with an individual through electrodes and detecting undesired contact of an electrode with an individual including testing means, control unit for activating testing means or lead off detection means arranged to verify a contact integrity, or a method of on demand verification of electrical contact integrity as claimed.

Although the specification was amended to attempt to incorporate by reference subject matter of a European application, no essential subject matter is permitted to be incorporated into a US application from a foreign application.
